

Digital and Drone Solution (DADS) Project in Cape Town

What is the project about?

The project will aim to develop an integrated digital health framework combining remote patient monitoring and the delivery of medication using drones to **make healthcare more accessible** and **improve efficiency**.

Responses to a **questionnaire for medical practitioners** will also guide the development of the framework.

Why have we developed a questionnaire for medical practitioners?

The opinion of medical practitioners is critical for developing healthcare technologies. With the input of medical practitioners, we can ensure that the technology serves their needs as well as the patients. **To complete this questionnaire please click here:** <https://forms.gle/M6Dzv7v5VWb5iqk18>

Who is involved in the project?

RaAzi: an innovative digital health logistics company based in Cape Town

Red Cross War Memorial Children's Hospital: a pivotal paediatric tertiary healthcare institution in Cape Town

Aparito: a UK based remote patient monitoring company
